

LIST OF CURRENT CLAIMS

1-5 (Cancelled)

6. (New) A directional control means for submerged surface suction cleaning apparatus comprising:

an elbow joint terminating in an inlet end and an outlet end, the inlet and outlet ends being inclined relative to each other and defining a peripheral groove adjacent the ends;

a first extension fitted to the inlet end of the elbow joint, the first extension comprising a peripheral rib configured to engage the peripheral groove adjacent the end of the inlet end in a snap fit, so as to allow the first extension to swivel relative to the elbow joint, the first extension terminating in a protruding spigot configured to be inserted into a cleaning apparatus; and

a second extension fitted to the outlet end of the elbow joint, the second extension comprising a peripheral rib configured to engage the peripheral groove adjacent the end of the outlet end in a snap fit, so as to allow the second extension to swivel relative to the elbow joint, the second extension terminating in a protruding socket configured to receive a flexible hose.

7. (New) A directional control means as claimed in claim 1 wherein the inlet end and the outlet end are inclined to each other at between 135° and 165°.

8. (New) A directional control means as claimed in claim 2 wherein the inlet end and the outlet end are inclined to each other at 150°.

Application No.: 10/539,059  
Examiner: James M. Hewitt  
Art Unit: 3679

9. (New) A directional control means as claimed in claim 1 wherein the peripheral rib and the peripheral groove are formed with anti-friction surfaces.
